LIFE SCIENCES EDITORIAL POLICY

LIFE SCIENCES was founded with the intention that scientific reports would be published expeditiously, within weeks of acceptance. *LIFE SCIENCES* has adhered to its original objective by keeping abreast of current advances in communication and publication technologies to rapidly disseminate new and significant information in pharmacology.

SCOPE OF THE JOURNAL

LIFE SCIENCES is an international weekly journal publishing full length reports on research in a range of areas in the life sciences. These areas include molecular and cellular aspects of:

- Cardiovascular & Autonomic Mechanisms
- Endocrinology
- Immunology
- Toxicology
- Drug Metabolism
- Growth Factors & Neoplasia
- Neuroscience

The journal publishes original research rapidly. Although full-length manuscripts are favored, exciting new results requiring rapid dissemination in shorter form will also be considered. These shorter submissions may be considered for either *LIFE SCIENCES* or for the ultra-rapid communications section *Pharmacology Letters*.

The journal favors publication of papers on seminal areas of science utilizing modern scientific technologies and exploring molecular and/or cellular mechanisms involved in explaining reported observations. Recommendations from the Declaration of Helsinki or NIH guidelines for care and use of laboratory animals must be adhered to. All communications will be rigorously reviewed. Submitted reports will be processed by a section editor, who will administer manuscripts in one of the seven science areas listed above.

acetylcholine, and caffeine 1597
acetylcholine, synthesis and release in kidney cortex 1699
acetylcholine release, and vasopressin 285
acetylcholine turnover, brain regional, and cobrotoxin 1013
acetylselenonium choline, pharmacology of PL-213
N-acetyltransferase, and light 1479
ACTH, cocaine sensitization and neuroendocrine responses 887
ACTH, stimulation of aldosterone production 1157
actinonin, and aminopeptidase M enzyme assay 2097
acute exercise, plasma free and sulfoconjugated catecholamines following 227
adenosine, and hypoxia in hippocampus 1073
adenosine, plasma, levels in rat PL-149
adenosine 3',5'-cyclic monophosphate (cAMP) efflux, from melanotrope cells 1667
adenosine deaminase, in antinociception PL-171
adenosine kinase, in antinociception PL-171
adenylate cyclase, in differential mechanisms of drug tolerance PL-89
adrenal gland, 5-HT depletion and $GABA_A$/BDZ-RC function 327
adrenal gland, and 5,7-DHT-induced anticonflict effect 315
adrenal gland, nephrectomy and angiotensin II PL-165
adrenal medulla, and amygdaloid catecholamines 353
adrenal membranes, rat, 2-[^{125}I]iodomelatonin, binding sites in 647
adrenaline, and sulfated catecholamines during exercise 227
adrenergic mechanism, duodenal osmolality and insulin PL-153
α_1-adrenergic stimulation, and inositol phosphates during reperfusion 2033
β-adrenergic receptors, desensitization of, by insulin PL-271
β-adrenergic stimulant, effect on histamine release from mast cells PL-201
adrenoceptor subtypes, in the cardiovascular response to cocaine 653
α-2 adrenoceptor, clonidine and male sexual function 1999
α-adrenoceptors, in sympathetic ganglia 757
α_1-adrenoceptors, blocking properties of spiroxatrine PL-1
α-2-adrenoreceptors, on indomethacin-induced intestinal ulceration 1151

SCOPE OF THE JOURNAL

LIFE SCIENCES is an international weekly journal publishing full length reports on research in a range of areas in the life sciences. These areas include molecular and cellular aspects of:

- Cardiovascular & Autonomic Mechanisms
- Endocrinology
- Immunology
- Toxicology
- Drug Metabolism
- Growth Factors & Neoplasia
- Neuroscience

The journal publishes original research rapidly. Although full-length manuscripts are favored, exciting new results requiring rapid dissemination in shorter form will also be considered. These shorter submissions may be considered for either LIFE SCIENCES or for the ultra-rapid communications section *Pharmacology Letters.*

The journal favors publication of papers on seminal areas of science utilizing modern scientific technologies and exploring molecular and/or cellular mechanisms involved in explaining reported observations. Recommendations from the Declaration of Helsinki or NIH guidelines for care and use of laboratory animals must be adhered to. All communications will be rigorously reviewed. Submitted reports will be processed by a section editor, who will administer manuscripts in one of the seven science areas listed above.

INSTRUCTIONS TO AUTHORS

LIFE SCIENCES and *Pharmacology Letters* Section

Contributions are reviewed and accepted on the basis of their scientific merit and the need for rapid publication. Contained in the journal:

- New scientific information
- Minireviews on selected aspects of a scientific field undergoing rapid change
- Brief conceptual papers based on original and/or literature data
- Relevant clinical discoveries
- Collections of selected papers on current concepts in a particular fields
- Symposium papers

SUBMISSIONS: Submit an original and two copies of the manuscript. Sign "Waiver of signature" on express mail packages. Submissions sent by facsimile will not be considered. Original manuscripts will not be returned in order to reduce mailing costs.

SECTION HEADING SELECTION: At the top right of each manuscript, in pen or pencil, indicate under which section heading the manuscript should be considered: Cardiovascular and Autonomic Mechanisms; Drug Metabolism; Endocrinology; Neuroscience; Toxicology; Growth Factors and Neoplasia; Immunology. *Pharmacology Letters* articles will be considered separately and must conform to the instructions for these submissions printed below.

SUGGESTED REFEREES: To expedite the review process, authors should submit names of four qualified reviewers for their work, including addresses and , if possible, facsimile numbers. Each reviewer should be an expert in the field of the manuscript. It is not necessary to choose referees from the Editorial Advisory Board unless those individuals are familiar with the topic of the submitted article.

PHARMACOLOGY LETTERS is a section providing for the rapid review and publication in English of original research involving rigorous experimental studies of immediate interest on any aspect of basic pharmacology. Clinical studies will be included if they have a direct bearing on the mechanism of drug action. Also invited are commentaries, new methodologies and manuscripts on pharmacologic theory (either conceptual or mathematical). Articles in the Section should be 4 to 6 pages in length with a maximum figure-plus-table combination of 4. It is recommended that no more than 20 references be included in any paper.

TYPING INSTRUCTIONS: The following detailed instructions are necessary to allow direct reproduction of the manuscript for rapid publishing. *If instructions are not followed, the manuscript will be returned for retyping.* To enhance the presentation of the Journal, we encourage you to work with us to achieve a pleasing uniformity of typeface and layout; however, it is not our intention to place restrictions on authors who do not have access to state-of-the-art printing capabilities. The following typefaces, in 12 point size, are preferred: Times Roman, Helvetica, Courier. Table and figure legends should be easily discernible from the text. Small italic typefaces are unsuitable. It is imperative that manuscripts are typed with a black carbon ribbon, or ink-jet or laser printer; this insures a superior quality reproduction in the photo-offset process. Dot matrix print is not acceptable. No erasure marks, smudges, spots, pencil or ink corrections or creases are allowed.

FORMAT FOR *PHARMACOLOGY LETTERS SECTION:* Observe "General Format" and "Title" on these Instructions. Following the author paragraph, *quadruple space,* then type a black line across the entire width of text. On the first line below the black line, at left margin, type: Abstract. Continue on the same line with a statement summarizing the important points of the text. The abstract paragraph should extend across the entire width of text. Under the abstract, type another black line across the width of text. *Double-space* below the black line, and type Introduction (underlined and centered over text). Continue with Instructions beginning with "Major Headings".

GENERAL FORMAT: Paper size should be 8 1/2" (216mm) by 11" (279mm) and the typing area must be exactly 6 5/8" (168mm) wide by 9 7/8" (250mm) long. Justify margins left and right (block format). The entire typing area of each page must be filled, leaving no wasted space. Text should be *single-spaced* on good quality white bond paper, and *double-spaced* between paragraphs. Special care should be taken to insure that symbols, superscripts and subscripts are legible and do not overlap onto lines above or below. Make sure text lines are equidistant.

TITLE: On first page of manuscript, start title 1" (25mm) down from top text margin. Type title in all capital letters, centered on the width of the typing area and single-spaced if more than one line is required. The title should be brief, descriptive and have all words spelled out. *Double-space,* then type the author(s) name(s), single-spaced if more than one line is required. *Double-space,* then type author(s) address(s), also single-spaced, capitalizing the first letter of main words. *Quadruple-space* before Summary (LIFE SCIENCES) or Abstract (*Pharmacology Letters*).

SUMMARY: (for LIFE SCIENCES) Center, type and underline summary heading, capitalizing the first letter. A *double-space* should separate the heading from the summary text. Indent approximately 1/2" (13mm) from both left and right margins for typing the summary. The summary should be intelligible to the reader without reference to the body of the paper and be suitable for reproduction by abstracting services. Introduction to the text (without a heading) should begin two spaces below the summary using full margins.

MAJOR HEADINGS: Headings throughout the paper should be arranged to increase clarity. Major headings, are Methods, Results, Discussion, Acknowledgments and References. Capitalize first letter, underline, and center headings on width of typing area. Other headings should be arranged to indicate their relative importance.

SYMBOLS AND FORMULAE: This material should be typed.

TABLES: Tables should be typed within the main body of the manuscript, but set apart, to avoid confusion with the text. The word TABLE, all letters capitalized, should be centered with table number (Roman numerals) above the table. Insert caption above the table, capitalizing the first letters of all main words. Place legend beneath the table. A single table must not overlap onto the following page.

FIGURES: Glossy prints or laserprinted originals are acceptable. Incorporate figures into main body of text using as little space as possible without hindering legibility after a 25% reduction in the printing process. Figures should be identified in pencil on the reverse side. Place in a protective envelope and attach to the manuscript with a paper clip. Center the abbreviation "Fig." with figure number (Arabic numerals) beneath the figure and above the legend. Indent the legend on both sides to distinguish from text.

HALF-TONES (PHOTOGRAPHS): Photographs must be in black and white. A clear print, large enough to be legible after 25% reduction, is required.

FOOTNOTES: These should be typed single-spaced at the bottom of the appropriate page and separated from the text by at least a double-space and a short line immediately above.

REFERENCES: Consecutive numbers in parentheses should be used to indicate the references in the text, e.g. (1,2). The full reference should be cited at the end of the manuscript. *Single-space* between as well as within references. References should contain names of all authors in CAPITAL letters (initials typed first, surnames following), title of journal (abbreviated, if possible, in accordance with *World List of Scientific periodicals*), volume number (underlined), first and last page numbers of article and year of publication (in parentheses) as illustrated below. References to books should contain author(s) names, in same format as above, title (underlined and first letter of main words capitalized), editor(s) names, if any, page number(s), publisher's name and location and year of publication (in parentheses). The phrase, "submitted for publication," is not considered a reference and should be placed in parentheses at the appropriate place in the text.

1. A.B. NORMAN, G. BATTAGLIA, A.L. MORROW and I. CREESE, Eur. J. Pharmacol. 106 461-462 (1985).
2. IAN CREESE, *Neurotransmitter Receptor Binding*, Henry I. Yamamura, S.J. Enna, and Michael J. Kuhar (Eds), 189-233, Raven Press, New York (1985).

RUNNING TITLE: A running title of not more than 40 spaces should be provided on a separate sheet.

KEY WORDS: One or more key words must be provided by authors for indexing of their article. Key words should be followed by enough explanatory information to make them useful to readers in a subject index, published at the end of every volume. Abbreviated forms of chemical compounds are not acceptable. Spell out entirely, using the official nomenclature

Example: cannabidiol, effect on testicular esterase
L-dihydroxyphenylalanine (L-DOPA), effect on protein synthesis

PAGINATION: Number each page in light blue pencil in lower right-hand corner.

CORRESPONDING AUTHOR: Place at bottom of first page, under a short black line. Extend name and address across entire width of page.

FURTHER INFORMATION: The information to contributors, especially nomenclature and abbreviations, contained in the Proceedings of the National Academy of Sciences may be used as a guide for preparation of manuscripts for any points not covered above.

COPYRIGHT AGREEMENTS: Since the enactment of U.S. Copyright laws on January 1, 1978, a Transfer of Copyright Agreement is required by the publisher to accompany every article accepted for publication. Upon acceptance for publication, the corresponding author of each manuscript will be sent an agreement to be completed prior to preparation for publication.

JOURNAL OF VESTIBULAR RESEARCH: EQUILIBRIUM AND ORIENTATION is the first journal to provide a forum for this growing branch of neuroscience. Timely experimental and observational reports, clinical studies, reviews and theoretical papers covering major advances in vestibular research are regularly provided by this new journal. Articles, written by authorities in the field, encompass:

1. Neurophysiology of the vestibular and related visual system;
2. Comparative anatomy and physiology of vestibular and related visual function;
3. Vestibular-related human performance in extreme dynamic environments;
4. Psychophysics of vestibular-related phenomena;
5. Modelling of vestibular related neural networks;
6. Motion and space sickness.
